

# Trader for Claims

Trader for Claims is an online claims management solution for underwriters, brokers and claims managers.

Functionally rich, Trader for Claims facilitates the management of aspects such as reserving, payment processing and insurance claim file tracking, using the latest Microsoft® technologies.

## Features

- Trader for Claims offers a claims recording element as part of a full lifecycle Trader placing solution, or can be deployed as a standalone claims management solution
- 100% cloud based, multiple language solution within a structured workflow environment
- Allows flexible claim details through a variety of data capture screens, from simple to complex information
- All reserves and payments are fully audited and are summarised in an easy-to-view current position grid
- Different types of messaging allow for the attachment of associated documents such as claim surveys, with emails notifying all relevant participants of new claims and/or claim updates

## Benefits

- Claims file tracking between the various participants enables account handlers to be allocated and patterns of workflow provided for the claim participants to interact in an online environment
- Solvency II compliant
- 100% cloud based, Trader is scalable and accessible any time, anywhere
- Policies bound within Trader can have their resultant claims associated and their financial movements tracked, thus aiding any automated renewal processes and triangulations
- A document production engine that delivers polished PDF documents in an instant
- The provision of a generic XML-based web services interface enables easy integration to Back-Office accounting systems
